

ODOO PAYMENT PROCESSING

Frequently Asked Questions

Quick answers before your demo.

Q1 Which Odoo versions are supported?

Bluemax Pay supports Odoo 16, 17, 18, and 19. We publish updates for each new version so you stay current.

Q2 Does it work on Community and Enterprise?

Yes. It runs on Odoo.sh and on self-hosted Community and Enterprise. Odoo Online (SaaS) has limits on third-party Python modules, so check with us first.

Q3 How is this different from using Stripe in Odoo?

Stripe can run Odoo POS terminals and online payments. Bluemax Pay puts POS terminals, online checkout, ACH, and payment links on one provider, and every payment posts right inside Odoo. One module, one provider, one support team.

Q4 Where is Bluemax Pay available?

Merchant accounts are open to businesses based in the United States.

Q5 Do I need a developer to install it?

Basic setup takes about 30 minutes. We provide step-by-step guidance and free support through your first live transaction.

Q6 Are you PCI compliant?

Yes. All card data is handled by Adyen's PCI Level 1 certified infrastructure. Sensitive data never touches your Odoo server.

Book a free 20-minute demo. See it work inside your Odoo.

No commitment. Personalized to your version and workflow. Free support through go-live.
